Unlocking the value of data through Drive Sweden's Innovation Program

With support from

VINNOVA

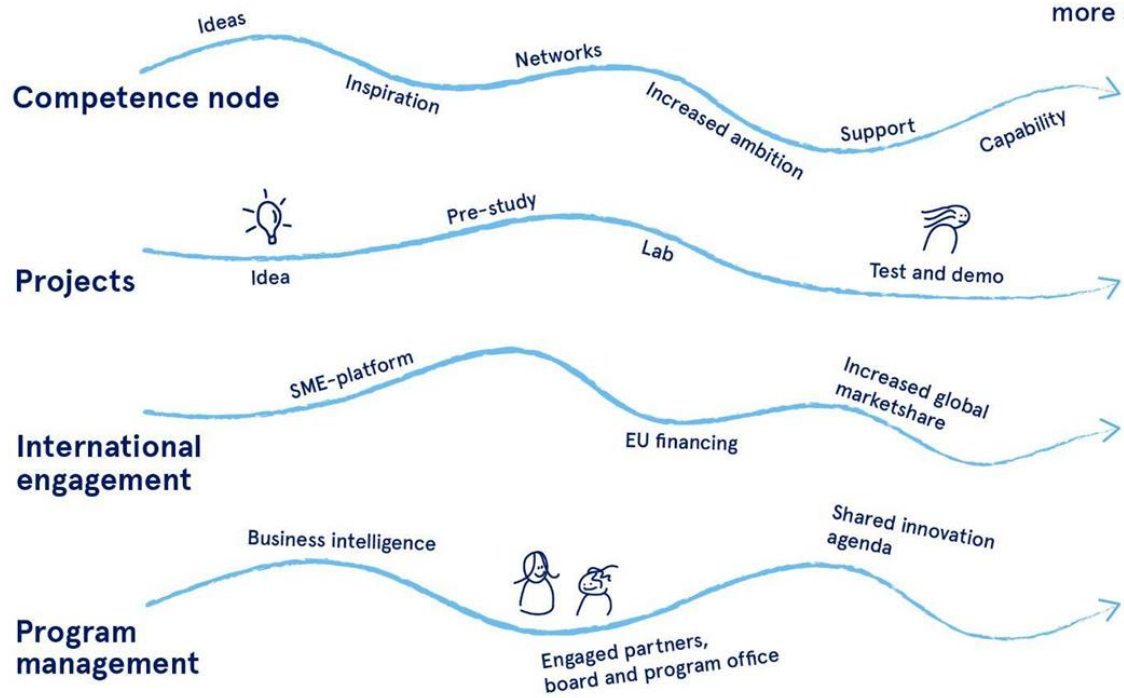

FORMAS

Strategic
innovation
programmes

DRIVE SWEDEN

Sweden takes a leading role in leveraging digital technologies to shape more sustainable transportation systems.

- Digital technologies are applied to optimize the utilization of vehicles and infrastructure.
- Access to sustainable mobility is improved for both people and goods.
- Environmental performance and traffic safety improved at the system level, thanks to digital technology and services.
- Swedish automotive and ICT industries remain strong and competitive.
- The mobility service market has been expanded with new types of actors.

DRIVE:SWEDEN

AI accelerates sustainable mobility

***CHANGE HOW
PEOPLE MOVE
AROUND***

Division of labour between man and machine

***UNDERSTAND
ALL MOVEMENT
DOOR TO DOOR***

Introducing a new way of refining Mobile Network Positioning Data

Crowd Analytics

Positions by the hour

Resolution: 35 football fields

Introducing a new way of refining Mobile Network Positioning Data

Crowd Analytics

Snapshots:

Positions by the hour

Resolution: 35 football fields

Movement Analytics

Animation:

Positions by the minute

Resolution: 1/2 penalty box

The three building blocks of Movement Analytics

INDIVIDUAL | **COORDINATE** | **TIME**

In what way does this help us accelerate the transition to sustainable mobility?

***CHANGE HOW
PEOPLE MOVE
AROUND***

Not only Origin-Destination Matrix – But also open ended movement analysis

UNDERSTAND MOVEMENT TO AND FROM ONE LOCATION

- How many? Where do they live/work?
- Where did they go to next? By which means of transportation?

FOLLOW UP INITIATIVES WHEN REDUCING CAR TRAFFIC

- How is restricting cars affecting ease of access to the area?
- Changes in types of visit (work, resident, passing through)
- Changes in mode of travel (car, bus, train, bike, walking)

Sensor Fusion

Semantics

The Problem

Rural → Urban

- 1.3 million people moving to cities each week.
- By 2050 the global population in cities will increase with 66%.

Up to 74%
traffic caused by "cruising for parking".

Up to 10%
speed limit signs display incorrect speed.

11,000
deaths caused by bad roads annually in the US

3 Bn\$
annual cost of potholes in the US.

✔ **\$100 B's in unrealized cost savings and operating efficiencies** ✔ **100 Mts in unnecessary CO₂ emissions**

1 Install

Data is collected using vehicles already on the road

2 Harvest

Our app processes data "on the edge" - directly on the phone

3 Access

Data is presented in a user-friendly format in our interactive web app

In Action

Data processed
"on the edge".

**No personal data is
stored.**

Images are anonymized, no faces or license plates are stored in the cloud. No video stream is uploaded from the phone.

3DAITMcity

**The Physical World
Made Digital**
