# CLIMATE-SMART MOBILITY In 2030

“Drive Sweden's vision is that Sweden takes a leading role in leveraging digital technology to shape a more sustainable transportation system”

“Viable Cities mission is climate neutral cities 2030 with a good life for all within planetary boundaries.”

# LEARNINGS

- **Focus areas is a good thing**
  - Set, work through, develop and persevere, dare to be nerdy and stupid
- **Mission and technology need to be addressed for the existing resources and behaviours. Most things are the existing**
  - We have poor control and poor utilization of the existing and old problems are still unsolved
- **Cities has to adapt to cooperate with "cheap", small and fast companies that can give us new things and insights**
  - Procurement and existing structures in the way?

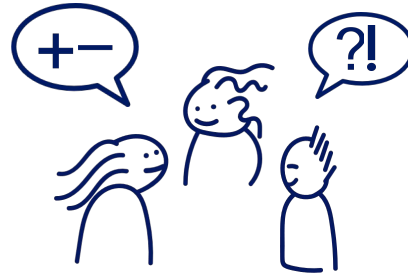

# RESULTS

- **Circa 12 project has come about through the collaboration- so far**
- **Better collaborations between small technology companies and cities**

We are in the middle of a new revolution where young small companies are at the forefront- more then usual

# Partners

- **Vinnova**
- **Lindholmen science park**
- **Drive Sweden**
- **Viable cities**
