Klara Bergkvist  
Head of GoMore Sweden

Our business / **Who we are**

## Peer-to-Peer car sharing platform

Our Mission / **What we do**

**We help people share cars**

Our Vision / **Why we like it**

**We help people get around**

**We bring people together**

**We take better care of the planet**

Our Motivation / **The problem we are trying to solve**

**We have a car problem**

**There are too many cars in the cities**

**We have more space for parking than living**

## Our Opportunity / **When do we see a change**

Car sharing is one of the most cost effective tools available in reduction of carbon emissions within the private car industry.

P2P car sharing is costless to implement for the individual and enables one to save money while reducing carbon footprint and amount of cars.

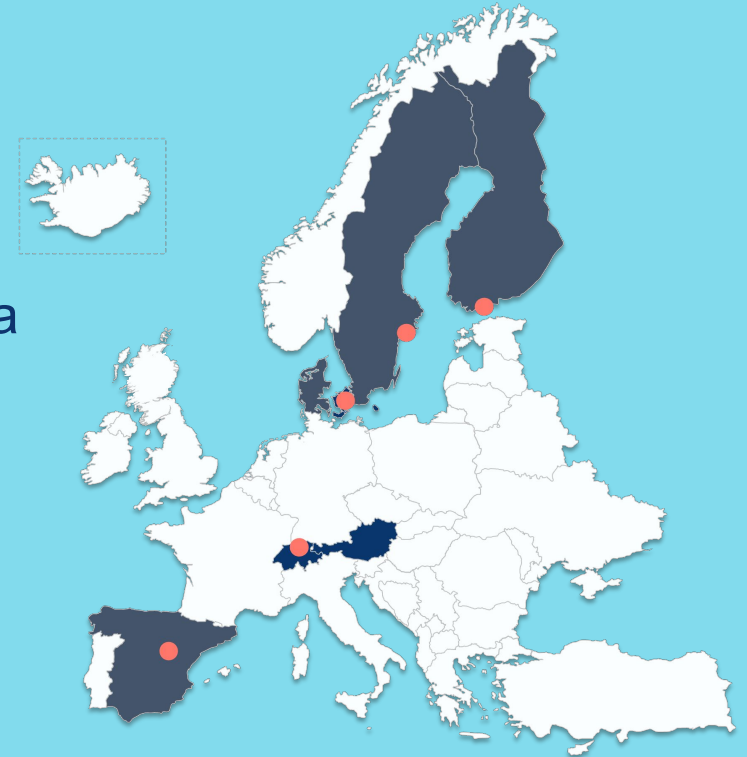

## Our Success / P2P rental growing

3,5 million members cross markets.

70% of our renters says that they will not buy a car in the future thanks to services like ours.

Shared cars can replace up to 15 "not shared cars" in the cities.

## Our Future / **What do we need**

Insurance is our top asked question among users.

Tax regulation and car rental regulation have big impact on our conversion of new owners.

Car design will be important in the future, where cars will need to be able to drive longer and more, compared to now.

Thank you!
