Scaling & Procurement

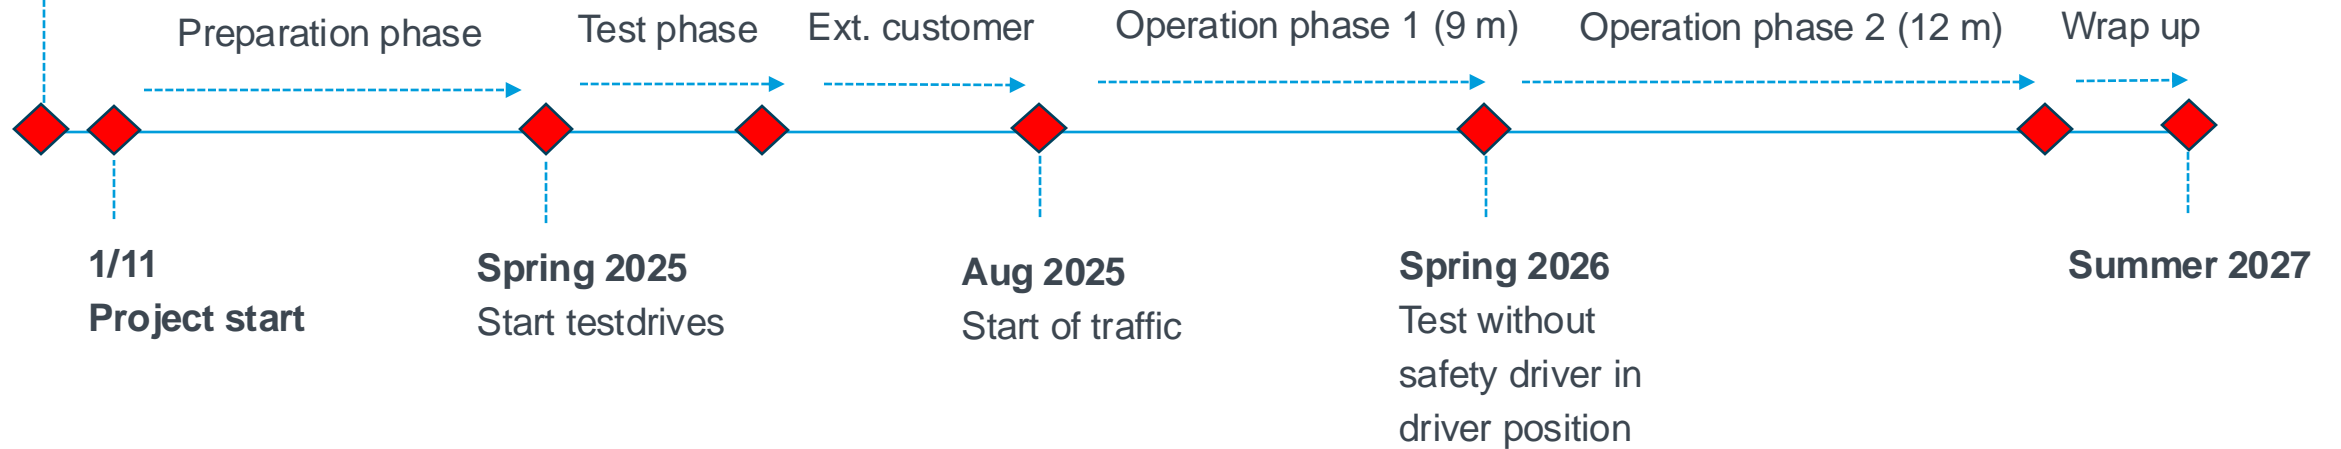

Objectives in the Gothenburg project.

1. Obtain the necessary permits to operate an autonomous bus in central Gothenburg.
2. Offer autonomous traffic without a safety driver behind the steering wheel, as part of the public transport offering.
3. Knowledge of the challenges and how to solve them – from technology and permits to infrastructure and ongoing operations.
4. Knowledge of passenger acceptance and behaviours. How do we need to adapt our services to an autonomous reality?

Preliminary time plan.
